Responsibility for generations

The Hörmann family business has over 85 years of experience as a construction component specialist. This gives us an obligation to both current and future generations. That's why environmental responsibility plays such an important role for us. With this in mind, we develop innovative solutions for sustainable products and intelligent environmental protection.

“A GOOD REPUTATION MUST BE EARNED.”

August Hörmann

In keeping with the tradition started by the company's founder, the Hörmann brand is a true promise of quality and, with sales of over 20 million doors and operators, is one of Europe's most successful suppliers. Due to the comprehensive international sales and service network, Hörmann is your strong partner for high-quality construction components.

WE THINK AND ACT GREEN. As a family business, we are very conscious of our responsibility to future generations. The Hörmann climate protection strategy aims to reduce and avoid CO₂ emissions. We cover 100% of our electrical power needs at all European production locations with purchased green electricity. We are also investing in a clean future with other measures such as the use of recycled paper, CO₂-neutral postal shipping and the recycling of transport packaging to save more than 75,000 tons of CO₂ every year. We work with ClimatePartner to offset the emissions that we do generate by supporting certified climate protection projects. In particular, we offset all CO₂ emissions produced in manufacture of products for residential construction as standard.

Brand quality made in Germany

The family-owned company Hörmann offers all important construction components for building and renovating projects from a single source. We manufacture in highly specialised factories using state-of-the-art production technologies. Our employees work intensively on new products, continual further developments and improvements to details. The results are patents and unique products on the market.

10-year
warranty¹⁾

LONG-LASTING. GUARANTEED. All major door and operator components are developed and manufactured by Hörmann. Endurance tests under real conditions ensure mature series products with Hörmann quality. Thanks to this and uncompromising quality assurance, you receive a 10-year warranty on all Hörmann roller garage doors RollMatic, RollMatic T and garage horizontal doors RollMatic OD, as well as a 5-year warranty on all Hörmann operators¹⁾.

¹⁾ The complete warranty conditions can be found at: www.hoermann.com

Roller garage door with tension spring assembly

RELIABLE COUNTERBALANCE. The counterbalance system²⁾ integrated in the side guides supports the operator during the opening and closing of the door and prevents damage to the operator mechanism. The multiple spring assemblies and the double cables prevent the door leaf from crashing in every position. In case of emergency, the door can be easily opened by hand. A crank handle ²⁾ is not necessary for this purpose for roller garage doors.

²⁾ Not with roller garage door RollMatic T

Patented tension spring technology with spring-in-spring system for roller garage door RollMatic

Universally applicable

Roller garage doors open vertically and offer maximum space inside and in front of the garage. The shape of the garage opening is not of prime importance when fitting the doors, whether the opening is rectangular or chamfered, or has a segmental or Norman arch. The RollMatic is also available as an external roller garage door for fitting in front of the garage opening for fitting situations with little sideroom.

ROLLER GARAGE DOOR ROLLMATIC.

The compact roller garage doors are the best choice if the ceiling area of your garage should remain free or if your garages are too small for a RollMatic OD or sectional door. The roller garage door curtain compactly winds up into the lintel of the door opening, thus allowing you to use the ceiling for lamps or as an additional storage space.

→ Further information can be found starting on page 26.

ROLLER GARAGE DOOR ROLLMATIC T.

The inexpensive roller garage door with powerful tubular operator creates more room in front of and inside the garage. The door curtain is guided via a guide roller and guide channel and ensures smooth door travel.

→ For further information, see from page 30.

GARAGE HORIZONTAL DOOR

ROLLMATIC OD. For garages with a particularly low headroom, space-saving garage horizontal doors are especially suitable. The door curtain is guided under the ceiling through narrow booms. Thanks to the space-saving, lateral operator fitting, the RollMatic OD has a required headroom of only 60 mm.

→ For further information, see from page 32.

Permanently beautiful door appearance

Regular opening leaves marks on the door curtain due to the design of the roller garage door. In addition to the high-quality surface coating, innovative solutions such as special bearing rings, the position of the roller and the new DuraBelt reduce these marks to a minimum. This way you can enjoy your attractive door for a long time.

Only from Hörmann
 Wear-resistant bearing rings
 on the roller garage door RollMatic

FEWER MARKS THANKS TO THE STANDARD DESIGN.

The rollers **1** guiding the door curtain above the booms are positioned in such a way that design-related marks can only occur in the less visible area behind the booms. With the roller garage door RollMatic, wear-resistant bearing rings additionally reduce **2** marks on the inside of the top profiles.

Only from Hörmann
 DuraBelt

ADDITIONAL SURFACE PROTECTION. Dirt can cause small scratch marks on the door curtain when it is rolled up. The DuraBelt **3** significantly reduces these marks. When rolling up, several belts are placed between the individual layers of the door curtain, thus reducing the contact with the profiles to a minimum. The optional DuraBelt is available for all internal and external roller garage doors and can also be retrofitted.

→ For further information, see from page 27.

Watch the video on YouTube or at
www.hormann.co.uk/media-centre

Intelligent operating comfort

Control your garage door and entrance gate operators, door operators, entrance door locks, lights and other devices simply, safely and conveniently via hand transmitter, radio switch or smartphone. All operators, receivers and control elements with BiSecur radio technology are 100% compatible with each other.

Only from Hörmann

CERTIFIED SAFETY. The bidirectional radio system BiSecur with particularly secure encryption protocol and stable, interference-free range makes sure that no one can copy your radio signal. This is also confirmed by the security experts of Bochum University and independent test institutes.

Watch the video on YouTube or at
www.hormann.co.uk/media-centre

INTELLIGENT TECHNOLOGY. Hörmann operators convince with more convenience, smart functions and intelligent technology. Our elegant hand transmitters allow you to open your door from your car, for example. Or you can simply use your smartphone as a door opener with the Hörmann BlueSecur app ¹⁾ or the Hörmann Smart Home control centre homee ²⁾.

Watch the video on YouTube or at
www.hormann.co.uk/media-centre

→ For further information, see from page 38.

¹⁾ For roller garage door RollMatic T optionally in conjunction with the external HET-BLE

²⁾ For roller garage door RollMatic and garage horizontal door RollMatic OD

At the press of a button, the colour of the LED on the hand transmitter HS 5 BS or the internal push button FIT 5 BS indicates the door position²⁾.

With the Smart Home control centre homee, you can control all door functions via your tablet or smartphone²⁾.

The perfect match for your home

To perfectly match your door to the architectural style of your home, we offer the roller garage doors RollMatic. RollMatic T and the garage horizontal door RollMatic OD in 17 door colours. For an especially elegant door appearance, we recommend the colour Noir 2100 Sablé Anthracite metallic.

→ For further information, see from page 24.

BOTTOM CENTRE. Roller garage door in Noir 2100 Sablé

Bottom right. Roller garage door in Traffic white RAL 9016

Natural door appearance

The particularly wear-resistant Decograin surface finish and the inexpensive Decopaint surface finish have a convincing real timber look.

→ For further information, see from page 25.

Top left. Roller garage door in Decograin Rosewood

Top right. Detail Decograin Golden Oak

BOTTOM. Roller garage door in Decograin Golden Oak

External roller garage door

The RollMatic is also available as an external roller garage door for fitting in front of the opening if your garage has little headroom and / or sideroom. The external roller garage door is supplied as a complete package with a matching operator. The side guides and the curtain cover come in the same colour as the door, or in the basic colour of the decor for Decopaint, to create a uniform and harmonious appearance.

→ For further information, see from page 27.

NEW. Entrance gates

The roller garage doors RollMatic and RollMatic T incl. housing box for the operator can also be used as a compact and reliable entrance gate at the property boundary.

Top left. External roller garage door in Light grey RAL 7035

Top right. Roller garage door and side door in Traffic white RAL 9016

Bottom left. Roller garage door as entrance gate in Anthracite grey RAL 7016

Side doors

At Hörmann, side doors are given just as much consideration. Only when the door matches the entrance gate perfectly does it make a great overall impression. The side door NT 60 is thus available in all surface finishes and colours. The high-quality 60 mm aluminium frame construction is the ideal frame for the door infill, which is fastened with glazing beads as standard.

→ For further information, see from page 37.

Profile versions and surface finishes

Roller garage doors RollMatic, RollMatic T and garage horizontal door RollMatic OD

Elegant aluminium profiles

The smooth surface of the aluminium profiles looks modern and elegant, unlike the ribbed profiles from other suppliers. Furthermore, a high-quality coating on the inside and outside of the door's surface makes it easy to clean. The hollow space of the profile is evenly filled with polyurethane rigid foam for quiet door travel.

Profile view of internal rolling shutters and garage horizontal doors

- 1 Inside of the door
- 2 Outside of the door

Profile view of external roller garage doors

- 1 Outside of the door
- 2 Inside of the door

Glazing elements 3

Get more daylight in your garage. The glazing elements with synthetic panes are arranged across the entire profile width. The number of elements depends on the respective door width. A maximum of ten profiles can be fitted with glazings in each door.

Ventilation grille 4

Ventilation of your garage improves the room climate and prevents mould. Ventilation grilles made of long-lasting plastic are arranged across the entire profile width. Each door can be equipped with a maximum of ten profiles.

Please note:

With respect to their technical properties and the paint system used all Hörmann roller garage doors correspond to the current state of the art. Pressure marks and abrasive wear are design-related and cannot be avoided. They do not impair the function and durability of the roller garage door. In order to reduce the design-related wear on the door curtain to a minimum, we recommend using the optional DuraBelt winding unit (further information can be found on pages 26 and 30).

Decograin surface finish

A special abrasion-resistant surface protection preserves the UV-resistant plastic film coating on the profiles over a long time.

Profile view of internal rolling shutters and garage horizontal doors

- 1 Door interior in brown
- 2 Door exterior in Decograin Golden Oak

Decopaint surface finish

The profiles are painted on the interior and exterior to look like timber.

Roller garage door RollMatic

With patented tension spring technology

Only from Hörmann

Roller garage door with tension spring assembly

Only from Hörmann

Wear-resistant bearing rings

A well-protected barrel

The standard cladding **1** of the barrel effectively prevents reaching into the door barrel. In addition, it protects the curtain from damage and dirt when the door is open.

Reliable counterbalance

The patented tension spring assembly with spring-in-spring system **2** and the transparent protective cover prevent broken springs from flying out and thus protect from personal injury.

Secure curtain guide

The standard wind locks **3** in the profile ends keep the door securely in the guide even under high wind loads (up to class 4) and also offer increased burglar protection.

Fewer design-related marks

The use of wear-resistant materials reduces marks of the bearing rings **4** on the top door curtain profiles.

In addition, the rollers are positioned above the boom, so that the design-related roller marks on the curtain are less visible.

Additional surface protection

With DuraBelt, **5** your door remains beautiful longer. When rolling up, several belts are placed between the individual layers of the door curtain, thus significantly reducing scratch marks caused by soiling of the door curtain. The DuraBelt can also be retrofitted to all internal and external roller garage doors.

Easy fitting

The booms, fascia panel and operator are fitted to the garage walls and operator are fitted to the garage walls and lintel. The curtain is then pulled effortlessly **6** onto the barrel by the operator and fixed via belts.

Size range

Max. width 6000 mm

Max. height 3100 mm

External roller garage door

Depending on the fitting situation, operators can either be installed on the left or right. The shaft cover is 100 mm wider in this area and encloses the operator, **7** protecting it from adverse weather effects or from unauthorised interference. The vision fields **8** in the spring cladding allow you to conveniently check whether the cable guide or springs are still functional. This gives you security even after many years of use.

Roller garage door RollMatic

* Compared to series 1

Only from Hörmann
European patent

Hörmann BlueSecur

Operation by smartphone using the
Hörmann BlueSecur app

Closing edge safety device

An optosensor in the threshold seal **1** reliably stops the door in the event of an unexpected obstacle – optional for doors up to 5000 mm wide and standard for doors from 5000 mm.

Emergency release from inside

You can easily unlock the operator of the internal rolling shutter using a Bowden cable in the garage. The external roller garage door RollMatic is operated via a release from the inside that is locked from the outside. Thanks to the spring compensation of the door, the door curtain can be easily pushed open by hand with both systems.

Emergency release from outside (optional)

For garages without a second entrance, we recommend the secured release in a lockable housing, **2** allowing you to open your garage door from the outside in case of an emergency (e.g. power failure).

Emergency power supply (optional)

With the emergency battery **3** you can bridge network power failures for up to 18 hours and max. 5 door cycles. Recharges during normal operation.

Acoustic alarm (optional)

The shrill alarm sound with a volume of 110 db (A) effectively deters burglars.

Manually operated door with manual door locking

Thanks to the supporting tension spring compensation, internal rolling shutters RollMatic can be opened and closed easily by hand – using the handle from the outside **4**, via a chain hoist with chain tensioner from the inside **5**. The manually operated rolling shutters are mechanically locked using interior and exterior handles and a lock. Solid metal bolts extend on the right and left into the side guides.

Roller garage door RollMatic T

With space-saving tubular operator

Only from Hörmann
DuraBelt

A well-protected barrel

The standard cladding **1** of the barrel effectively prevents reaching into the door barrel. In addition, it protects the curtain from damage and dirt when the door is open. An extruded aluminium section with a white powder-coated surface finish connects the curtain securely to the barrel.

Space-saving construction

The compact door construction with tubular operator has a required headroom of only 290 mm and sideroom of only 75 mm (up to 2300 mm door height) or 105 mm (from 3001 mm door width) and is also suitable for particularly narrow fitting situations. The booms **2** ensure smooth door travel and are optimally sealed by the standard brush seals.

Additional surface protection

With the optional DuraBelt, **3** your door remains beautiful longer. When rolling up, several belts are placed between the individual layers of the door curtain, thus significantly reducing scratch marks caused by soiling of the door curtain. The DuraBelt can also be retrofitted to all internal and external roller garage doors.

Easy fitting

The pre-assembled barrel incl. cover and the pre-drilled booms with standard backfill are quickly and easily screwed to the garage walls and lintel.

Emergency operation as standard

Even in the event of a power failure, you can easily open the internal rolling shutter RollMatic T from the inside using the standard emergency crank handle. With optional external emergency operation, **4** a crank handle is inserted into a lockable opening that opens the door from the outside.

Space-saving tubular operator

The powerful tubular operator is equipped with mechanically adjustable end-of-travel positions. Optionally, the operator is also available with electronic end-of-travel position cut-out. The operator can be controlled from the inside with the stylish control. The integrated LED lighting provides more light in the garage.

Closing edge safety device as standard

An optosensor in the bottom seal reliably stops the door in the event of an unexpected obstacle. The standard version is available with spiral cable **5** or optionally with radio transmission **6** and without spiral cable.

BiSecur

As standard with two 4-button hand transmitters HSE 4 BS, textured surface black with plastic caps

Garage horizontal door RollMatic OD

Ideal for modernisation

Smooth door travel

Twin rollers evenly and smoothly guide the door curtain under the ceiling. The narrow aluminium guide rails are connected by stable corner diversions with small **1** radii. Due to this compact design, the garage horizontal door RollMatic OD only requires a lintel of 60 mm.

Well-sealed

The door is almost completely closed in the lintel area thanks to the specially shaped folding roller bracket **2**. An elastic lip seal in the lintel area and brush seals in the booms protect against driving rain (class 2). The flexible EPDM bottom profile compensates for unevenness in the floor and seals the bottom edge of the door.

Reliable counterbalance

The multiple spring assemblies and integrated catch safety device **3** protect the door from crashing in the event of a possible cable tear.

Additional emergency release

We recommend using an optional emergency release lock for garages without a second entrance **4**. An inconspicuous round cylinder (cannot be integrated in the master key system) releases your garage door and you can easily open it in case of emergency.

Variable fitting

The vertical side guides and the fascia panel are supplied in the colour of the door as standard. Thus the door can also be fitted partially or completely in the opening.

Simple modernisation

Using the optional retrofit fascias **5** the door is fitted in the reveal and at the same time covers unattractive gaps in the lintel and reveal area. Additional brickwork and plastering work are no longer required.

Size range

Max. width 3500 mm

Max. height 3000 mm

Space-saving operator fitting*

The operator booms **6** can either be fitted on the right or the left horizontal boom. This compact design does not require additional headroom.

Emergency power supply

The emergency battery HNA* **7** for garage door operators ProMatic and SupraMatic bridges network power failures for up to 18 hours and a maximum of 5 door cycles. Recharges during normal operation.

* Shown with optional operator SupraMatic

Optional extras

Roller garage doors RollMatic and RollMatic T

Chamfered bottom profile

(only for RollMatic)

The solution for sloping ground: A chamfered aluminium bottom weather seal compensates for differences in height over the entire door width (max. 300 mm). The profile can be fitted without any difficulty. It is simply screwed onto the inserted curtain. The bottom profile is delivered powder-coated in Jet black (similar to RAL 9005) as standard.

On request, the bottom profile is also available **1** in a colour matching the door colour.

Additional fascia panel

The additional fascia panel **2** stabilises the fascia panel when fitted in the opening or behind the opening if the fascia panel is visible in the opening. It harmoniously covers the lintel without any unattractive fitting holes. The additional fascia panel is available in the door colour or with Decograin surface finish.

Fitting compensation set

With uneven walls, the optional fitting compensation set **3** for flush door fitting can be applied. This is particularly advantageous for modernisations or timber building structures.

For more information, consult the technical manual at www.horman.co.uk.

Door sizes

- Width 875 – 1284 mm
- Height 1800 – 2500 mm

Standard equipment

- 60 mm thick weather-resistant aluminium profiles in the colour of the profiles or, in the case of Decopaint, in a colour matching the decor **1**
- Black plastic lever handle set with oval rose escutcheons and profile cylinder lock **2**
- 3-way adjustable hinges **3** optionally in black, white or aluminium natural finish

Optional equipment

- Concealed hinges for an elegant door appearance **4**
- Lever handle or lever / knob handle sets in aluminium natural finish, **5** cast aluminium RAL 9016, **6** brushed stainless steel **7**
- Overhead door closer with slide rail and hold-open device
- 3-point locking (latch, bolt and 2 locking hooks)

Explanations

BMB	Ordering size width
BMH	Ordering size height
LB	Clear width
LH	Clear height
LDB	Clear passage width
LDH	Clear passage height
EBT	Fitting depth
S	Required headroom
SBH	Additional fascia panel height
OFF	Finished floor level
AUSS	Exterior
X1	Min. 150 mm
X2	LB ≤ 3000 = 75 mm (FS 75) LB > 3000 = 105 mm (FS 105)

Fitting depth EBT

Up to LH = 2300 mm	290 mm
From LH = 2301 mm	335 mm

Required headroom S / additional fascia panel SBH

Up to LH = 2300 mm	290 mm
From LH = 2301 mm	335 mm

Clear passage height LDH

FS 75	LH – 70 mm
FS 105	LH – 110 mm

Side space requirement

Up to LB = 3000 mm	80 mm
From LB = 3001 mm	110 mm

Performance characteristics according to European standard 13241

Thermal insulation

U-value fitted door ¹⁾	5.0 W/(m ² ·K)
-----------------------------------	---------------------------

Wind load classes

Without wind lock

Up to LB = 3000 mm	Class 3
--------------------	---------

With wind lock

Up to LB = 4000 mm	Class 4
Up to LB = 4500 mm	Class 3
Up to LB = 5000 mm	Class 2

¹⁾ The U-values for fitted doors without glazing elements with the dimensions 2500 × 2000 mm

Garage horizontal door

Flush fitting in the opening with panel 95

Explanations

BMB	Ordering size width
BMH	Ordering size height
LB	Clear width
LH	Clear height
LDB	Clear passage width
LDH	Clear passage height
RAMB	Overall frame dimension width
RAMH	Overall frame dimension height
LE	Distance back with operator
S	Required headroom
OFF	Finished floor level
AUSS	Exterior

Side space requirement 102 mm

Performance characteristics according to European standard 13241

Thermal insulation

U-value fitted door* 5.6 W/(m²·K)

Wind load classes

Up to LB = 3000 mm	Class 3
Up to LB = 3500 mm	Class 2

Water tightness under heavy rain Class 2

* The U-values for fitted doors without glazing elements with the dimensions 2500 × 2200 mm

Dimensions in mm

Fitting behind the opening,
opening inwards

Side door with block frame

Fitting in the opening,
opening inwards

Side door with block frame

Fitting in the opening,
opening outwards

Dimensions in mm

Side door with corner frame

Internal fitting,
opening inwards

Side door with corner frame

External fitting,
opening outwards

Explanations

BRB	Nominal size – width
BRH	Nominal size – height
BMB	Ordering size width
BMH	Ordering size height
LDB	Clear passage width
LDH	Clear passage height
LF	Structural opening
RAMB	Overall frame dimension width
RAMH	Overall frame dimension height
OFF	Finished floor level
AUSS	Exterior

Performance characteristics according to European standard EN 14351-1

Thermal insulation

U-value fitted door*	5.6 W/(m ² ·K)
----------------------	---------------------------

Wind load classes

Single-leaf	Class 4A
-------------	----------

* In relation to door size 1250 × 2200 mm

Material

Door leaf frame made of extruded aluminium profiles with roller garage door section infill, position of the sections does not match roller garage door RollMatic, use of glazing and ventilation grille corresponds with roller garage door RollMatic.

Dimensions in mm

Experience Hörmann quality in new construction and modernisation

Hörmann products have impressive durability and high functionality. You can easily plan for new construction as well as modernisation. The carefully coordinated solutions make your home more beautiful, more secure and more comfortable.
